Investment Strategy

DJE - Zins & Dividende is a multi-asset fund managed independently from any benchmark. The fund aims for absolute returns with the help of conservative drawdown management. On the equity side, the fund invests primarily in equities with above-average dividend yields. The investment objective is to invest across asset classes and generate regular income from fixed income instruments, supplemented by capital gains and dividends on the equity side. The selection criteria for companies are recurring dividend payments as well as investor-friendly corporate policies such as stock buybacks. While the focus is on dividend paying stocks, the fund may also invest in companies that do not currently pay a dividend. The fund's flexible investment approach allows it to adapt quickly to changing market conditions. To reduce volatility, at least 50% of the fund is invested in bonds. Equity exposure fluctuates between 25% and 50%. Currency risks can be hedged opportunistically.

The Funds are actively managed by DJE and, where a benchmark index is indicated, without reference to it. The presented charts and tables concerning performance are based on our own calculations according to the gross performance (BVI) method² and illustrate past development. Past performance is not indicative for future returns. The BVI method takes into account all costs incurred at the fund level (e.g. management fees), the net performance and the issue fee. Additional individual costs may be incurred at the customer level (e.g. custodian fees, commission and other charges). Model calculation (net): an investor wishes to purchase shares for Euro 1,000. With a maximum issue surcharge of 0.00%, he has to spend a one-off amount of Euro 0.00 when making the purchase. In addition, there may be custodian costs that reduce performance. The custodian costs are decided by your bank's price list and service charges

AA	27.19%	B	3.77%
A	29.01%	CCC	0.00%
BBB	10.99%	Not Rated	10.93%

ESG Rating What it means

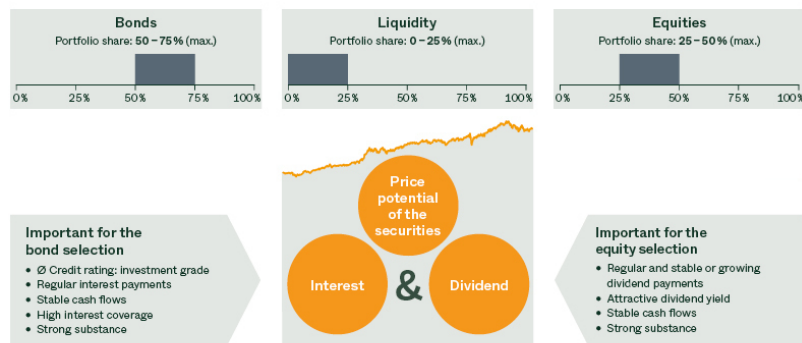

AAA, AA	Leader: The companies that the fund invests in show strong and/or improving management of financially relevant environmental, social and governance issues. These companies may be more resilient to disruptions arising from ESG events.
A, BBB, BB	Average: The fund invests in companies that show average management of ESG issues, or in a mix of companies with both above-average and below-average ESG risk management.
B, CCC	Laggard: The fund is exposed to companies that do not demonstrate adequate management of the ESG risks that they face, or show worsening management of these issues. These companies may be more vulnerable to disruptions arising from ESG events.
Not Rated	Companies in the fund's portfolio that are not yet rated by MSCI, but these are rated as part of our own analysis.

Investment Approach

The objective of DJE - Zins & Dividende is to generate a steady return – even in volatile markets. On the fixed income side, the fund invests primarily in debt instruments from sovereign issuers and corporates with investment-grade ratings. On the equity side, the fund relies on the established DJE dividend strategy. We believe that dividends can make a strong contribution to performance over time due to the compound interest effect. Time-series analysis shows that only around half of the equity returns are due to capital gains. The other half is attributable to dividends. The fund aims for an above-average dividend yield relative to the broader market. However, the fund may also include stocks that do not currently pay a dividend. The asset allocation is flexible and is adjusted depending on market environment. To reduce volatility, at least 50% of the fund are invested in bonds. Equity exposure fluctuates between 25% and 50%. Currency risks can be hedged opportunistically.

Flexible Asset Allocation

Source: DJE Kapital AG. For illustrative purposes only.

Opportunities

- + The portfolio is continuously adjusted to the changing market environments.
- + Possible share price gains are complemented by interest income from international bonds and dividend distributions.
- + The balanced fund aims for a steady positive performance with low volatility in all market environments.
- + Regular returns from interest and dividends can serve as a buffer in the event of stock market slumps.

Risks

- There is a currency risk for euro investors in securities not denominated in euros.
- The value of an investment may rise or fall and investors may not get back the amount invested.
- The income from interest and dividends is not guaranteed.
- Bonds are subject to price risks if interest rates rise, as well as country risks and the creditworthiness and liquidity risks of their issuers.
- Share prices can fluctuate relatively strongly due to market, currency and individual value factors.

DJE - Zins & Dividende I (EUR)

Balanced fund with dividend stocks aiming for low volatility

Fund Manager

Dr. Jan Ehrhardt

Responsible Since 06/12/2010

Dr Jan Ehrhardt is Deputy CEO of DJE with responsibility for Research & Portfolio Management and Wealth Management. As a fund manager, he is also responsible for DJE's dividend strategies. The business economist graduated with a PhD from the University of Wuerzburg.

Stefan Breintner

Responsible Since 01/07/2019

Stefan Breintner is Head of Research & Portfolio Management and, as an analyst, is responsible for the basic materials, chemicals, energy and construction & materials sectors. Since 2019, he has also been co-fund manager of DJE's dividend strategies. The business economist has been with DJE since 2005.

DJE Kapital AG

DJE Kapital AG is part of the DJE Group, can draw on around 50 years of experience in asset management and is today one of the leading bank-independent financial service providers in German-speaking Europe. Our investment strategy, both in equities and bonds, is based on the FMM method developed in-house: a systematic analysis which takes three views on securities and the financial markets – fundamental, monetary and market-technical. DJE follows sustainability criteria when selecting securities, takes into account selected sustainable development goals, avoids or reduces adverse sustainability impacts and is a signatory to the United Nations "Principles for Responsible Investment".

Monthly Commentary

After a strong first quarter, the international stock markets largely went into reverse in April. The stock markets were primarily burdened by the development of US inflation. In March, the inflation rate rose to 3.5% (February: 3.1%) compared to the same month in the previous year. The US economy grew by 1.6% in the first quarter compared to the previous quarter - weaker than expected, but significantly stronger than the eurozone, whose economy grew by 0.3% and was thus able to avoid a technical recession. As a result, expectations for interest rate cuts in the US declined even further and largely changed to the view that the US key interest rate plateau would remain at the current level of 5.25 to 5.50% for the time being. For the eurozone, however, the markets continue to expect a rate cut in June. The markets were also kept on tenterhooks by Iran's attack on Israel and the Israeli response, which caused the VIX volatility index to spike to its highest level of the year and briefly drove up the oil price. As the equity markets corrected, risk premiums for corporate bonds and US high-yield bonds widened on the bond markets and interest rates for high-quality government bonds rose. The DJE - Zins & Dividende fell by -1.37% in this market environment. On the global equity market, only four sectors were able to escape the negative trend and end the month with a positive result: Basic Materials, Utilities, Energy and Food & Beverages. The weakest results came from the property, media, telecommunications and consumer goods & services sectors. The fund benefited in particular from its exposure to the energy, utilities and healthcare sectors. On the one hand, the oil price, which has risen in the meantime, and, on the other, well-performing obesity products from selected pharmaceutical companies contributed to this. Performance was weighed down primarily by the consumer goods & services, financial services and technology sectors. The latter suffered from the rising interest rate environment. The fund management increased the weighting of the energy and financial institutions sectors, among others, and reduced the industrials and technology sectors, where some gains were realised. As a result, the fund's equity allocation fell moderately from 49.36% to 48.82%. On the bond side, the broad rise in yields weighed on the fund's performance. One exception was European high-yield bonds, which benefited from the intact expectations of interest rate cuts in Europe. The fund management reduced its exposure to short-dated US government bonds in favour of longer-dated corporate bonds from the technology and mining sectors. As a result of the adjustments, the modified duration of the bond portfolio (including cash and derivatives) fell from 3.38% to 3.31%. At 50.29%, the bond ratio remained almost unchanged compared to the previous month (49.65%). Liquidity totalled 0.89% at the end of the month. The currency hedge of the US dollar against the euro was cancelled, but the partial hedge of the Hong Kong dollar against the US dollar was retained.
