Investment Strategy

The fund invests globally, primarily in equities and bonds, and completely independent from benchmark requirements. The asset allocation of is based on the FMM methodology with equities being the main focus. The FMM-Fonds was launched in 1987 it was the first fund managed by an independent asset manager in Germany. FMM stands for the following market indicators: fundamental, monetary and market sentiment. The fund invests both in value stocks and in promising growth companies. All the companies are required to meet the strict analytical criteria of the FMM methodology.

Source for all performance data: Anevis Solutions GmbH, own illustration. As at: 25/07/2024.

The Funds are actively managed by DJE and, where a benchmark index is indicated, without reference to it. The presented charts and tables concerning performance are based on our own calculations according to the gross performance (BVI) method² and illustrate past development. Past performance is not indicative for future returns. The BVI method takes into account all costs incurred at the fund level (e.g. management fees), the net performance and the issue fee. Additional individual costs may be incurred at the customer level (e.g. custodian fees, commission and other charges). Model calculation (net): an investor wishes to purchase shares for Euro 1,000. With a maximum issue surcharge of 5.00%, he has to spend a one-off amount of Euro 50.00 when making the purchase. In addition, there may be custodian costs that reduce performance. The custodian costs are decided by your bank's price list and service charges

ESG Rating What it means

AAA, AA

(tCO2e / \$M sales)

Leader: The companies that the fund invests in show strong and/or improving management of financially relevant environmental, social and governance issues. These companies may be more resilient to disruptions arising from ESG events.

BBB, BB **Average:** The fund invests in companies that show average management of ESG issues, or in a mix of companies with both above-average and below-average ESG risk management.

B, CCC Laggard: The fund is exposed to companies that do not demonstrate adequate management of the ESG risks that they face, or show worsening management of these issues. These companies may be more vulnerable to disruptions arising from ESG events.

Not Rated Companies in the fund's portfolio that are not yet rated by MSCI, but these are rated as part of our own analysis.

Source: MSCI ESG Research as at 28/06/2024 Information on the sustainability-relevant aspects of the funds can be found at www.dje.de/en-de/company/about-us/Invest-sustainably/

Investment Approach

The FMM-Fonds is an investment concept which is managed independently of any benchmark constraints with the aim to achieve an optimal risk/reward profile. The basis is the three-dimensional FMM-methodology, which was developed by Dr Jens Ehrhardt and has a proven track record of approx. 50 years. According to the methodology the following factors are taken into account: (F)undamental factors like micro- and macroeconomic data for corporations and economies, but also (M)onetary and technical (M)arket aspects such as sentiment which are often neglected by other fund managers. Fundamental factors play a more important role in the long-term strategic orientation of the portfolio than, for example, technical market factors. The latter are more significant for the fund's short-term, tactical positioning. In normal market phases, the FMM-Fonds focuses on current trends. In extreme situations (such as during euphoric phases), the fund can also follow an anticyclical investment strategy.

The essential parts of the FMM methodology

Source: DJE. For illustrative purposes only.

Opportunities

- + Flexible, asset-managing management through active adjustment of the fund structure to capital market conditions
- + Experienced fund manager following an investment approach based on fundamental, monetary and market-technical analysis (FMM), which has a proven track record since DJE was founded in 1974
- + Participation in the growth opportunities of the global stock markets unconstrained of benchmark index parameters

Risks

- The value of an investment can go up or down and you may not get back the amount invested.
- The FMM method does not guarantee investment success
- Equity prices may exhibit strong volatility depending on market conditions
- Bonds are subject to price risks when interest rates rise, as well as country risks and the credit and liquidity risks of their issuers

FMM-Fonds P (EUR)

Germany's first fund with an independent wealth management approach

Fund Manager

Dr. Jens EhrhardtResponsible Since 17/08/1987

Dr Jens Ehrhardt is the founder and CEO of DJE. He received his doctorate in 1974, the same year he founded today's DJE Kapital AG, which he has managed from the outset. From his doctorate, he developed the DJE investment method, FMM, which has been continuously refined to this day and takes fundamental, monetary and market indicators into account.

DJE Kapital AG

DJE Kapital AG is part of the DJE Group, can draw on 50 years of experience in asset management and is today one of the leading bank-independent financial service providers in German-speaking Europe. Our investment strategy, both in equities and bonds, is based on the FMM method developed in-house: a systematic analysis which takes three views on securities and the financial markets – fundamental, monetary and market-technical. DJE follows sustainability criteria when selecting securities, takes into account selected sustainable development goals, avoids or reduces adverse sustainability impacts and is a signatory to the United Nations "Principles for Responsible Investment".

Monthly Commentary

International stock markets performed unevenly in June - strong in the USA, weak in Europe. As expected, the European Central Bank lowered key interest rates, but this interest rate cut was already largely reflected in share prices. In contrast, the European elections and the early elections in France had a negative impact on the stock markets. As announced, the US Federal Reserve maintained its key interest rate level. However, US inflation fell moderately and the core rate excluding food and energy fell even more sharply, meaning that the market's expectations of a key interest rate cut in the current year remained unchanged. This supported the US stock markets. The FMM-Fonds rose by 1.09% in this market environment. Its benchmark index, the MSCI World (EUR), rose by 3.18%. On the global equity market, half of the sub-sectors produced positive results. The best performing sectors were technology, consumer cyclicals and healthcare, while commodities, consumer goods & services and utilities were particularly disappointing. The highest individual stock results came from Deutsche Telekom and the pharmaceutical companies Eli Lilly (USA) and Roche (Switzerland). In contrast, the Canadian mining company Nutrien, the German utility RWE and the German insurer Allianz, among others, were disappointing. The fund management adjusted the allocation over the course of the month and increased the weighting of the technology, insurance and healthcare sectors. In turn, the basic materials, energy and food & beverages sectors, among others, were reduced. The fund's equity allocation rose from 71.97% to 74.87% as a result of the adjustments. The bond ratio fell slightly from 11.01% to 8.84%. The certificate ratio (gold) remained almost unchanged at 2.26% (previous month: 2.27%). Liquidity fell from 14.22% to 13.19%.
